

Design Synopsis

We have been mindful to ensure that the selected equipment does not replicate that already on site. Most pieces are suitable for the required age range of 5-12 years, except for the Cableway, Spin-a-Bounce and Surf Rider which we advise being suitable for juniors and above. As each child's development and level of ability is different, younger users may feel confident tackling these pieces.

Equipment will be manufactured from steel except for the Agility Trail being timber and fitted with steel shoes. Along with the wet pour and grass mat surfacing, all will be compliant with BS EN 1176. We have opted for a blue, yellow, and green colour pallet for the steel pieces to compliment equipment already on site and provide a cohesive and natural appearance.

The Swirl Roundabout will be installed close to the pathway that runs through the entire site, with additional wet pour used to create a connection to the pathway, allowing a smooth transition and ease of access for wheelchair users.

The 30 metre Cableway will be installed in the area close to the boundary fence line of Grantown Road. The trees lining Grantown road will provide a natural barrier and screen between equipment and the residential properties, but all equipment will be installed to ensure they are clear of the tree canopy.

The remaining equipment has been organised into suggested age range, with the turnstile and 4Saw seesaw being located closest to the existing equipment on site that is typically aimed at younger users.
